Network synthesis filters Wikipedia

Network synthesis is a method of designing signal processing filters.It has produced several important classes of filter including the Butterworth filter, the Chebyshev filter and the Elliptic filter.It was originally intended to be applied to the design of passive linear analogue filters but its results can also be applied to implementations in active filters and digital filters.

Network analysis electrical circuits Wikipedia

Network analysis is the process of finding the voltages across, and the currents through, all network components. There are many techniques for calculating these values. However, for the most part, the techniques assume linear components. Except where stated, the methods described in this article are applicable only to linear network analysis.
